**Eastern Corporation Limited  
ASX Announcement**

**GALILEE ENERGY LIMITED  
PERMEABILITY TESTING RESULTS**

The enclosed letter to Galilee Energy Limited ('GEL') shareholders advising of further results from the recent exploration drilling at Rodney Creek 8 was received by the Board of Eastern Corporation Limited ('ECU') today.

ECU holds approximately 67% of GEL

For and on behalf of  
The Board of Directors

Campbell Smith  
Managing Director

Riverside Centre  
Brisbane Qld 4001

Dear Shareholder,

Further encouraging analysis has been received from the data obtained during the drilling programme at Rodney Creek 8 conducted in July 2007.

Permeability analyses have indicated a range of 1 millidarcy up to 120 millidarcies with a weighted average recorded of 50 millidarcies.

The permeability test, measured in millidarcies (MD), is a measure of the flow rate of gas through the coal seam to the well bore. A reading of 50 MD is considered above average and is comparable with other producing coal seam methane areas in Australia.

MultiPhase Technology in Melbourne conducted the testing which was then analysed by Dr Robert Koenig who is based in Littleton, Colorado.

These results, coupled with those announced on 1 November, are a further indication of the favourable geological conditions for the successful economic recovery of coal seam methane from ATP 529P and 799P.

Further data on the adsorption isotherms is expected mid January. We will then be in a position to complete a final report outlining the full test results and their impact on the development programme going forward.

Yours sincerely,

**Rino Camarri**  
Chairman
